Hi Enveritas Team,

I'm applying for the Backend Software Engineer role. Most of my recent work focuses on Python, Django, and PostgreSQL, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Enveritas:

- **TekNotes** (GitHub): Built an async collaborative documentation platform using Python, Django, PostgreSQL, and Redis to handle high-throughput collaborative markdown indexing and real-time synchronization. Benchmarked at sub-50ms cache read latency under concurrent users.
- **PixCell** (Live): Engineered real-time telemetry streaming pipelines that connected computer vision inference models to web clients, handling continuous high-bandwidth video data constraints.

Given Enveritas's focus on agricultural supply chain data verification and large-scale relational modeling, I can contribute immediately without needing to be trained on the fundamentals of PostgreSQL, Django, and async data pipelines.
