Hi JB,

I'm applying for the Agentic Python Engineer role. Most of my recent work focuses on Python, FastAPI, and PostgreSQL, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Evaboot:

- **PixCell** (Live): Built an async diagnostic platform using Python, FastAPI, and Supabase to handle live microscopy telemetry and automated LLM diagnostics. Benchmarked at sub-second streaming latency under production workloads.
- **Gitlore** (Live): Engineered edge-native AST parsing workers that analyzed complex repositories into visual architecture models, handling zero-cold-start runtime constraints.

Given Evaboot's focus on autonomous agent workflows and high-volume data enrichment pipelines, I can contribute immediately without needing to be trained on the fundamentals of FastAPI and agentic LLM orchestration.
