Hi Kodify Team,

I'm applying for the Full-Stack Developer role. Most of my recent work focuses on Next.js, TypeScript, PostgreSQL, and Redis, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Kodify Media Group:

- **Gitlore** (Live): Built an async code architecture intelligence platform using TypeScript, Hono, and Cloudflare Workers to handle autonomous codebase mapping and AST diagram generation. Benchmarked at sub-second edge inference latency under multi-tenant requests.
- **TekNotes** (GitHub): Engineered resilient relational database schemas and multi-tier Redis caching pipelines, handling high-frequency write operations and instant cache invalidation constraints.

Given Kodify Media Group's focus on high-volume media delivery and ultra-low-latency streaming applications, I can contribute immediately without needing to be trained on the fundamentals of Next.js, TypeScript, and PostgreSQL caching.
