Hi Lemon.io Team,

I'm applying for the React & Python Full-stack Software Developer role. Most of my recent work focuses on Python, FastAPI, React, and PostgreSQL, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Lemon.io:

- **Trellis** (GitHub): Built an async graph routing engine using Rust, Axum, and PostgreSQL to handle high-concurrency knowledge graph routing. Benchmarked at sub-50ms query latency under load.
- **PixCell** (Live): Engineered real-time telemetry streaming pipelines that connected computer vision inference models to web clients, handling continuous high-bandwidth video data constraints.

Given Lemon.io's focus on autonomous full-stack development for high-growth startups, I can contribute immediately without needing to be trained on the fundamentals of FastAPI, React, and PostgreSQL.
