Hi Native Team,

I'm applying for the Front-End Engineer role. Most of my recent work focuses on Next.js, React 19, TypeScript, and Tailwind CSS, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Native:

- **Gitlore** (Live): Built an async code architecture intelligence platform using TypeScript, Hono, and Cloudflare Workers to handle autonomous codebase mapping and AST diagram generation. Benchmarked at sub-second edge inference latency under multi-tenant requests.
- **Lupus Lens** (Live): Engineered reactive canvas rendering layers with Gradio client AI inference integrations, handling real-time spectral hardware alignment constraints.

Given Native's focus on pixel-perfect consumer interfaces, fluid state machines, and web performance, I can contribute immediately without needing to be trained on the fundamentals of React 19, Next.js, and TypeScript.
