Hi SafetyWing Team,

I'm applying for the Product Engineer role. Most of my recent work focuses on Python, TypeScript, React, and PostgreSQL, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at SafetyWing:

- **STEMIFlow** (Live): Built an async emergency medical routing engine using Python, FastAPI, Next.js, and PostgreSQL to handle real-time cardiovascular emergency triage and predictive risk scoring. Benchmarked at sub-second automated alert dispatch under simulated hospital load.
- **PixCell** (Live): Engineered real-time telemetry streaming pipelines that connected computer vision inference models to web clients, handling continuous high-bandwidth video data constraints.

Given SafetyWing's focus on borderless global safety infrastructure and friction-free user platforms, I can contribute immediately without needing to be trained on the fundamentals of building reliable full-stack applications.
