Hi Talent Sam Team,

I'm applying for the Back-End Developer role. Most of my recent work focuses on Python, PostgreSQL, and Redis, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Talent Sam:

- **TekNotes** (GitHub): Built an async collaborative documentation platform using Python, Django, PostgreSQL, and Redis to handle high-throughput collaborative markdown indexing and real-time synchronization. Benchmarked at sub-50ms cache read latency under concurrent users.
- **Trellis** (GitHub): Engineered an asynchronous entity mapping architecture that traversed relational node hierarchies, handling high-density graph connection constraints.

Given Talent Sam's focus on scalable backend APIs and optimized database querying, I can contribute immediately without needing to be trained on the fundamentals of Python, PostgreSQL, and caching pipelines.
