Hi Talent Sam Team,

I'm applying for the Front-End Developer role. Most of my recent work focuses on Next.js, React 19, TypeScript, and Tailwind CSS, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Talent Sam:

- **Gitlore** (Live): Built an async code architecture intelligence platform using TypeScript, Hono, and Cloudflare Workers to handle autonomous codebase mapping and AST diagram generation. Benchmarked at sub-second edge inference latency under multi-tenant requests.
- **PixCell** (Live): Engineered real-time telemetry streaming pipelines that connected computer vision inference models to web clients, handling continuous high-bandwidth video data constraints.

Given Talent Sam's focus on responsive design, fluid animations, and high-performance client rendering, I can contribute immediately without needing to be trained on the fundamentals of React 19, TypeScript, and modern web standards.
