Hi Tether Team,

I'm applying for the Frontend Software Engineer role. Most of my recent work focuses on TypeScript, React, and Next.js, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Tether Operations Limited:

- **Gitlore** (Live): Built an async code architecture intelligence platform using TypeScript, Hono, and Cloudflare Workers to handle autonomous codebase mapping and AST diagram generation. Benchmarked at sub-second edge inference latency under multi-tenant requests.
- **Trellis** (GitHub): Engineered an asynchronous entity mapping architecture that traversed relational node hierarchies, handling high-density graph connection constraints.

Given Tether Operations Limited's focus on mission-critical web interfaces and secure digital asset platforms, I can contribute immediately without needing to be trained on the fundamentals of TypeScript, React, and high-precision UI engineering.
