Hi Trafilea Team,

I'm applying for the Product Engineer role. Most of my recent work focuses on TypeScript, React, Python, and AWS, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Trafilea:

- **Gitlore** (Live): Built an async code architecture intelligence platform using TypeScript, Hono, and Cloudflare Workers to handle autonomous codebase mapping and AST diagram generation. Benchmarked at sub-second edge inference latency under multi-tenant requests.
- **PixCell** (Live): Engineered real-time telemetry streaming pipelines that connected computer vision inference models to web clients, handling continuous high-bandwidth video data constraints.

Given Trafilea's focus on high-scale direct-to-consumer platforms and resilient checkout customer journeys, I can contribute immediately without needing to be trained on the fundamentals of React, TypeScript, and cloud-native backends.
