---

Hi Yooli Team,

I'm applying for the Software Engineer role. Most of my recent work focuses on Python, React, and RESTful APIs, specifically building low-latency backend services and async pipelines.

A couple of projects relevant to what you're doing at Yooli:

- **PixCell** (Live): Built an async diagnostic platform using Python, FastAPI, and Supabase to handle live microscopy telemetry and automated LLM diagnostics. Benchmarked at sub-second streaming latency under production workloads.
- **TekNotes** (GitHub): Engineered resilient relational database schemas and multi-tier Redis caching pipelines, handling high-frequency write operations and instant cache invalidation constraints.

Given Yooli's focus on clean RESTful service architectures and responsive web experiences, I can contribute immediately without needing to be trained on the fundamentals of Python, React, and REST API design.
